PROFESSIONAL SUMMARY

Results-driven Backend Software Engineer with **3+ years** of experience architecting scalable, high-performance microservices for large-scale inventory management platforms. Expert in **Java 17, Spring Boot, Spring Security, OAuth2/JWT, MySQL, Redis, and AWS**, with a strong track record designing low-latency REST APIs, event-driven messaging systems, and cloud-native distributed architectures.

Proven ability to deliver measurable outcomes: **40–60% API latency reduction, 50% database load reduction, and 99.9% service uptime**. Skilled in **Agile/Scrum** delivery, **SOLID** design principles, **Test-Driven Development (TDD)**, system design for high-throughput services, and AI-augmented engineering workflows. **AWS Certified Developer – Associate**.

EXPERIENCE

Backend Software Engineer

Jan 2023 – Present

RipeTech Solutions Pvt. Ltd. | StockRegister

Remote

- Architected and maintained **production microservices** for StockRegister, an inventory management SaaS platform processing **5M+ inventory records** and serving **10,000+ daily active users** with **99.9% uptime SLA**.
- Engineered **30+ RESTful APIs** using Java 17 and Spring Boot adhering to **SOLID principles** and clean architecture patterns, handling **500K+ daily requests** and reducing average API response time by **40–60%** via SQL indexing, query optimization, and Redis caching.
- Implemented **Spring Security** with **JWT-based authentication, OAuth2 authorization, and role-based access control (RBAC)**, securing all platform endpoints and reducing unauthorized access incidents by **90%+**.
- Designed **event-driven, asynchronous processing pipelines** using **AWS SQS** (producer-consumer architecture aligned with Apache Kafka patterns), processing **100K+ async events daily** for notifications, real-time data sync, and background job orchestration.
- Applied **Redis cache-aside strategy with TTL tuning** across high-traffic business workflows, reducing MySQL database load by **~50%** and improving p99 response latency from **800ms to under 200ms**.
- Led **system design** for inventory and order-processing modules, applying **CAP theorem trade-offs**, horizontal scalability patterns, load balancing strategies, and database sharding considerations to support **3x traffic growth** without degradation.
- Refactored tightly coupled monolithic modules into **independently deployable microservices** using **Spring Cloud** patterns, reducing inter-service coupling, cutting deployment cycle time by **30%**, and enabling zero-downtime releases.
- Rebuilt synchronous batch workflows as **asynchronous, multithreaded pipelines** using Java **ExecutorService** and **cron scheduling**, reducing bulk operation processing time by **70%** and eliminating request timeouts on large-dataset operations.
- Delivered **100+ production-grade features** in **Agile/Scrum** sprints (2-week cycles), collaborating with product, frontend, and QA teams via sprint planning, daily standups, and retrospectives; consistently met sprint velocity targets.
- Practiced **Test-Driven Development (TDD)** using **JUnit 5 and Mockito**, achieving **80%+ unit and integration test coverage** on critical service layers; reduced production defect rate by **40%** over 6 months.
- Built and managed **Maven-based** project structures with dependency management, multi-module builds, and **GitHub Actions CI/CD pipelines** for automated testing, containerized builds, and deployment to **AWS ECS/ECR** via Docker.
- Provisioned and managed cloud infrastructure across **AWS EC2, Elastic Beanstalk, ECS, ECR, RDS, S3, SQS, and CloudWatch**; containerized all services with **Docker** ensuring environment parity from dev to production.
- Implemented backend **observability stack** using **Datadog, Grafana, and CloudWatch**: configured SLO/SLA dashboards, latency and error-rate alerting, and distributed tracing – reducing mean time to resolution (MTTR) by **55%**.
- Drove **AI-augmented development workflows** integrating **OpenAI, Gemini, and Claude APIs** alongside Cursor AI, accelerating feature delivery by **25%** and reducing boilerplate code generation time significantly.

TECHNICAL SKILLS

Languages: Java 17, SQL, JavaScript
Backend & Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Cloud, Hibernate/JPA, REST APIs, Microservices, OAuth2, JWT, RBAC, SOLID Principles, TDD, Multithreading, Event-Driven Architecture, Cron Scheduling, SSE
Databases & Caching: MySQL, PostgreSQL, Redis (cache-aside, TTL, session caching)
Messaging & Async: AWS SQS, Message Queues, Dead-Letter Queues (DLQ), Producer-Consumer Architecture, Apache Kafka (concepts)
Testing: JUnit 5, Mockito, Integration Testing, Test-Driven Development (TDD), Postman
Build & DevOps: Maven, Docker, GitHub Actions, CI/CD Pipelines, Git, GitHub
Cloud & Infrastructure: AWS EC2, Elastic Beanstalk, ECS, ECR, RDS, S3, SQS, CloudWatch, Load Balancing, Horizontal Scaling
Monitoring & Observability: Datadog, Grafana, CloudWatch, Distributed Tracing, SLO/SLA Dashboards
System Design: Distributed Systems, Scalable Architecture, CAP Theorem, High-Availability Design, API Design, Database Indexing & Sharding
Methodologies: Agile, Scrum, Sprint Planning, Code Review
AI Tools & APIs: OpenAI APIs, Gemini APIs, Claude Sonnet, Claude Opus, Cursor AI

CERTIFICATIONS

AWS Certified Developer – Associate
AWS Certified Cloud Practitioner

EDUCATION

ABES Engineering College <i>Bachelor of Technology in Computer Science Engineering</i>	Ghaziabad, India <i>2019 – 2023</i>
